

9 Programme

9.1.1. This section sets out the programme for the first 10 years, specific dates are not provided at this point, as the precise date for the construction commencing was not known at the time of authoring. This programme will be updated as the project progresses. The montane scrub and Caledonian woodland planting may take place over a three year period to take account of potential risk factors, such as poor weather conditions and availability of planting stock. The first monitoring of any planting areas will be programmed for the next years botanical survey season, in the summer months to optimise survey conditions. The results of the monitoring surveys will be used to inform the monitoring programme beyond year 10 and an updated programme will be produced for years 10 to 20, during year 10.

Table 9-1 – Habitat Restoration/ Creation and Monitoring Programme

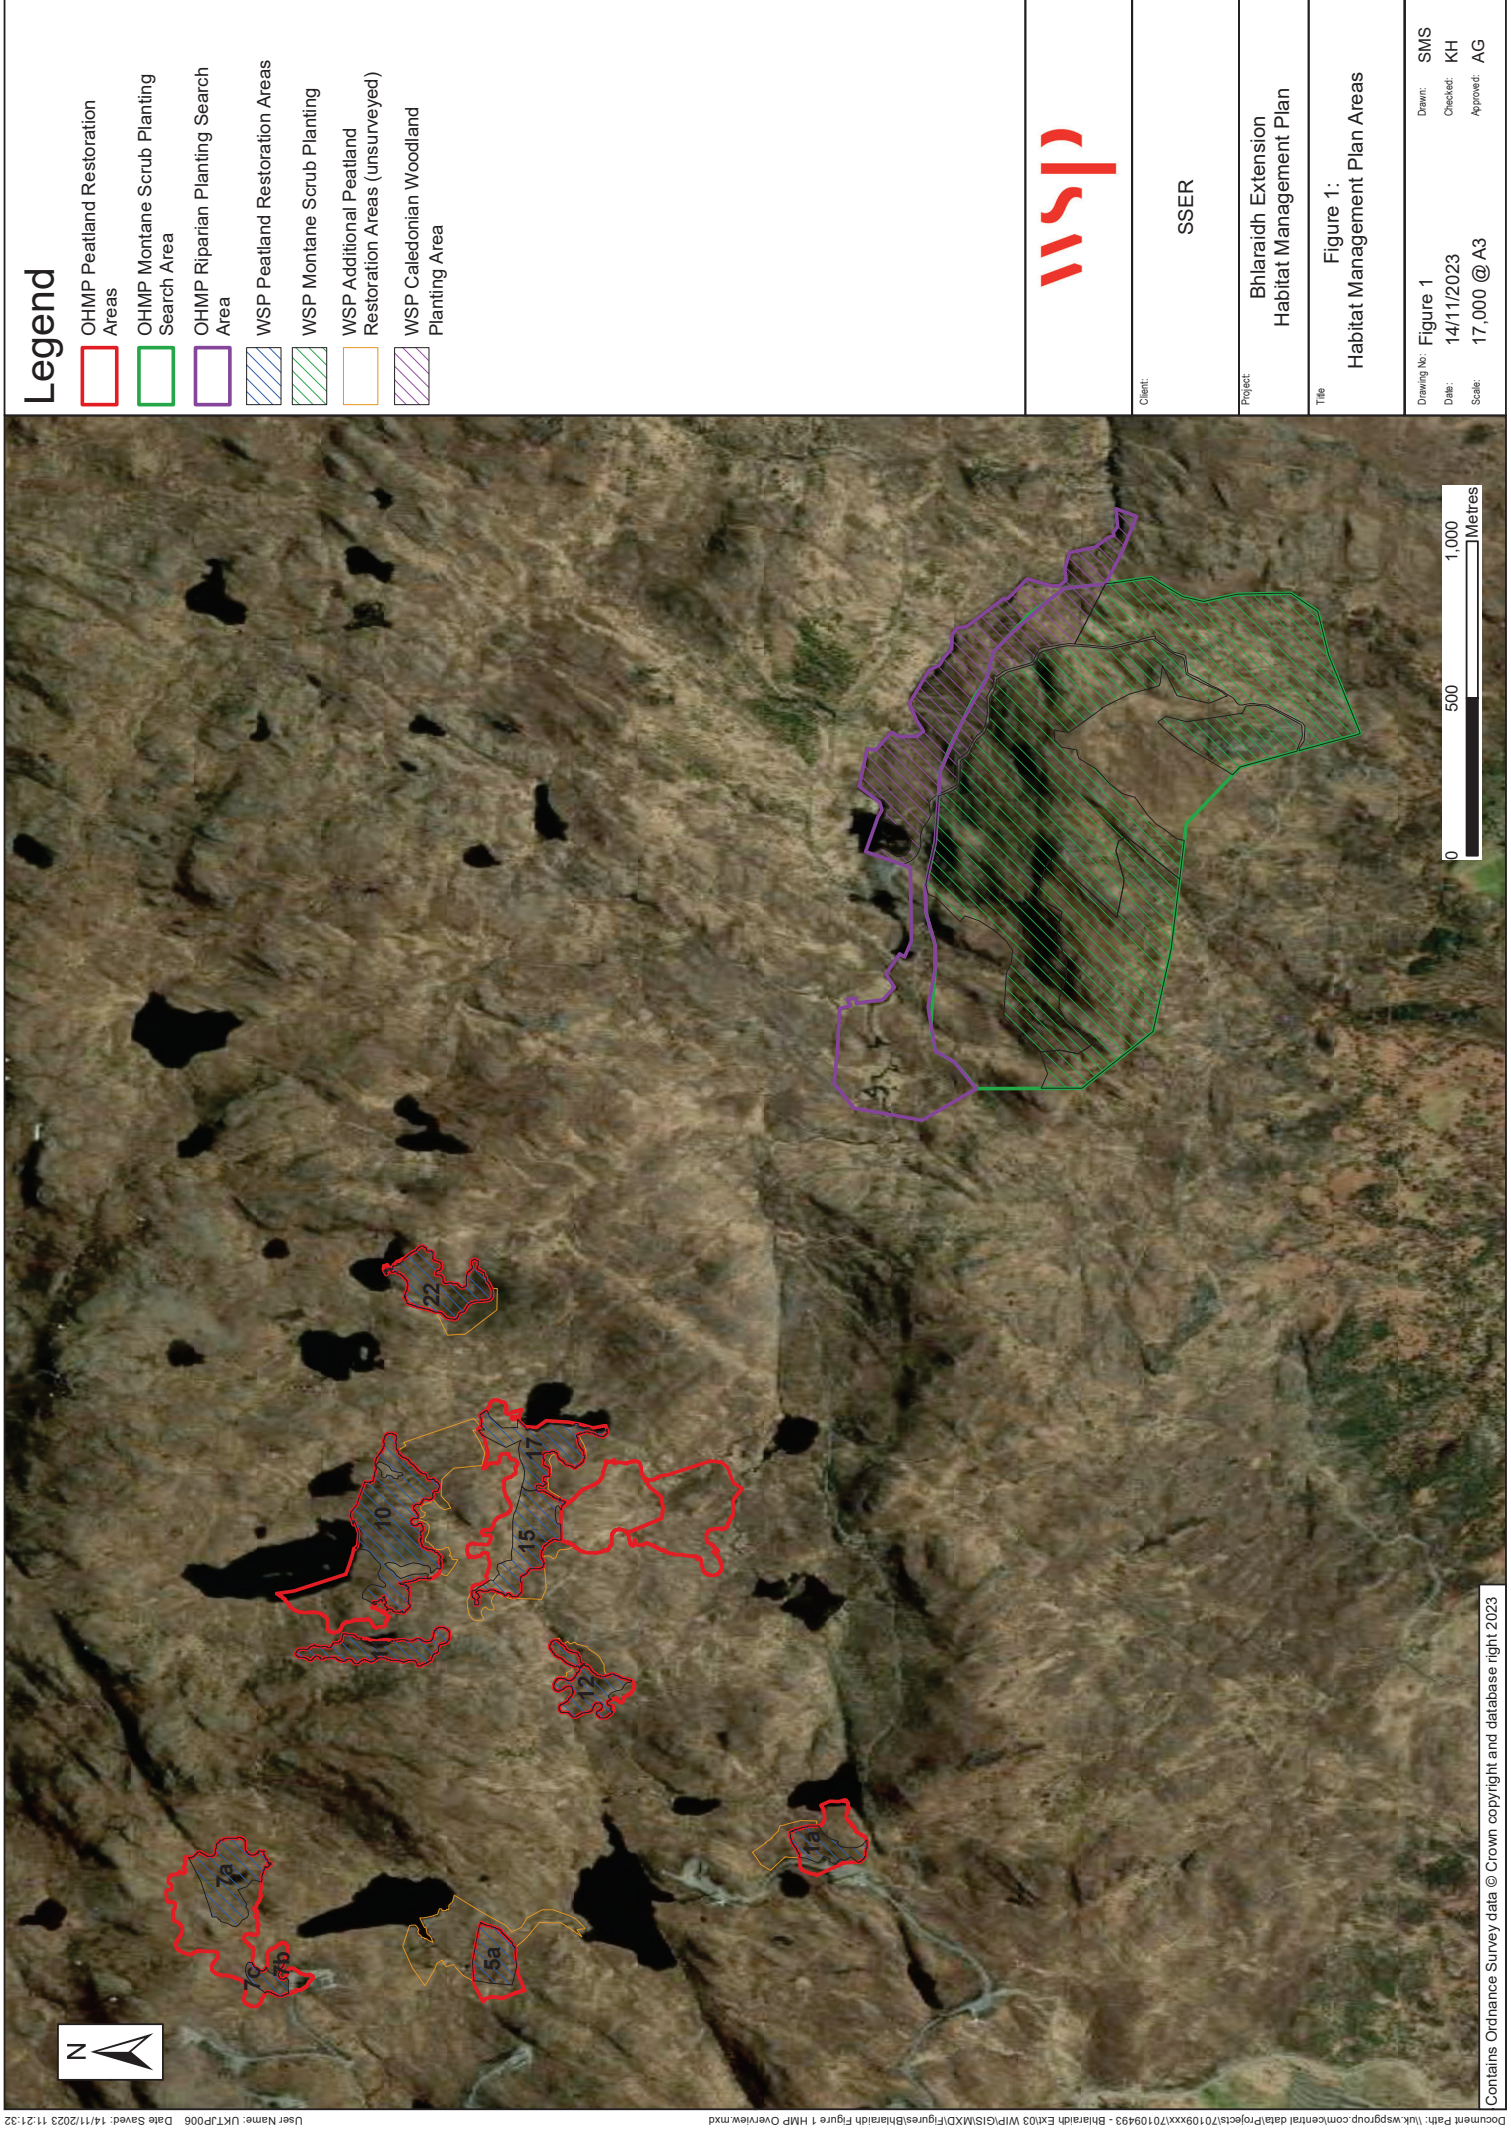

Monitoring Programme																									
		Year/Phase																							
		Construction					Operation																		
		1		2			3			4		5		6		7		8		9		10			
Capital Work		Sp	Su	Au	Wi	Sp	Su	Au	Wi	Sp	Su	Au	Wi	Sp	Su	Au	Wi	Sp	Su	Au	Wi	Sp	Su	Au	Wi
Peatland restoration																									
Montane scrub planting																									
Caledonian woodland planting																									
Installing diver raft																									
Monitoring Programme																									
Install dipwells																									
Dipwell monitoring * Timescale to be set for subsequent years following year 1 results																									
Peatland areas - vegetation transects and fixed point photography*years maybe adjusted depending when restoration works completed																									
Montane scrub - vegetation monitoring																									
Caledonian woodland - vegetation monitoring																									
Diver raft monitoring																									

Sp=Spring, Su=Summer, Au=Autumn, Wi=Winter (precise months are not detailed to account for seasonal variability)
